

Introducing PLPS EARTH+® The Next Gen of Sustainable Solutions

Our vision and values are fundamentally governed by the philosophy that sustainable practices yield sustainable results. That's why we launched **PLPS EARTH+®**, our exclusive label and packaging line that reflects our commitment to sustainability in the materials we use for clients and our overall dedication to reducing our impact on the environment.

All products undergo extensive testing to ensure each component meets APR critical guidance

The finished product offers optimal appearance, functionality, and recyclability

Our custom solutions allow brands to realize their sustainable vision and still preserve their product's design & functionality

Meet Earth+ Shrink Recyclable Shrink Sleeves

Our latest PLPS Earth+® product is a line of recyclable shrink sleeves that offer both sustainability benefits and 360° branding to help your product stand out from the competition.

We understand that switching to sustainability is challenging, which is why our experts provide end-to-end support. We'll collaborate with your stakeholders to ensure the end product is designed for excellence to meet quality and efficiency standards, aesthetic goals, and recyclability criteria.

Best of all, when your product hits the shelves, your customers will rejoice to know they no longer need to remove the sleeve from the container to recycle; it happens at the recycling plant:

PET

Allows the sleeve to recycle directly with any PET bottle or container.

HDPE

Ensures the container cleanly separates from the sleeve during recycling,

We are also working hard to develop additional best-in-class sustainable products for the EARTH+® portfolio. Future items include Pressure Sensitive and Extended Content Labels and Flexible Packaging.
