

**PREMIUM LABEL & PACKAGING SOLUTIONS LAUNCHES MYCLINICALSUITE™  
TO PROVIDE FASTER, MORE FLEXIBLE CLINICAL TRIAL LABELS**

***Dedicated production capabilities and expanded healthcare leadership  
strengthen the company's growth strategy.***

FAIRFIELD, N.J. — [June 9, 2026] — Premium Label & Packaging Solutions (PLPS) today announced the launch of [MyClinicalSuite™](#), a clinical-only label and packaging production environment designed to help clinical research organizations maintain the highest standards of quality, compliance, and data integrity, while providing faster turnaround times.

Operating from PLPS's Lakewood, New Jersey, facility, MyClinicalSuite™ combines in-house variable data printing (VDP), robust quality procedures, including inline vision inspection systems, and a dedicated team of clinical packaging experts to create a more agile and responsive production model.

The launch of MyClinicalSuite™ reflects the continued growth of PLPS's healthcare segment with the addition of industry veterans Stacy Falconer, Bill Kougelis, and Stephanie Wydra. Together, the team brings decades of healthcare experience across clinical trial labeling, packaging operations, commercial strategy, variable-data management, specialty applications, and regulated pharmaceutical environments. Their combined experience supporting national and global market leaders and managing large-scale healthcare packaging programs helped shape the development of MyClinicalSuite™ to address the increasing demand for speed and flexibility in clinical markets.

"Healthcare label and packaging programs require specialized expertise, operational precision, and rapid responsiveness," said Chris Payne, CEO of Premium Label & Packaging Solutions. "Our investment in this clinical-first operating structure and our growing healthcare team reflects the increasing importance of PLPS's capabilities across regulated healthcare markets."

Unlike traditional production environments where clinical work competes with larger commercial production schedules, MyClinicalSuite™ supports the unique demands of clinical trial programs. By separating clinical production workflows from commercial operations, PLPS can shorten timelines, offer greater operational flexibility, and ensure smaller-batch clinical programs receive the same level of responsiveness and priority as larger production runs.

"Sponsors are under enormous pressure to move faster while navigating increasing complexity, tighter timelines, evolving trial designs, and heightened regulatory expectations," said Falconer. "MyClinicalSuite™ was built to address those realities directly. The unique production environment is managed by an experienced team focused solely on clinical trials, allowing us to deliver speed without compromising quality, compliance, or control."

"MyClinicalSuite™ reduces risk, improves patient-level tracking accuracy, and secure trial administration," said Bill Kougelis, Clinical Product Line Director at PLPS. "By managing in-house VDP and label/booklet production within a clinical-focused environment, we can execute late-stage changes more efficiently, improve turnaround performance, and help sponsors maintain complete data integrity and patient control throughout the trial process."

(More)

PLPS's Lakewood ISO-certified facility follows cGMP standards and has been producing clinical trial labels and packaging since 2008. The site offers a wide range of clinical trial labels and packaging applications, including booklets, extended content, and specialty labels such as cryogenic and pattern adhesive. Integrated vision systems and 200% inspection processes validate both barcodes and human-readable data throughout production.

The launch of MyClinicalSuite™ further expands PLPS's broader healthcare capabilities in pharmaceutical, medical device, OTC, and regulated healthcare markets across pressure sensitive labels, expanded content labels, shrink sleeves, flexible packaging, and specialty packaging applications.

### **About Us**

Premium Label & Packaging Solutions (PLPS) was formed in 2021 to bring together a group of award-winning converters with decades of experience in Healthcare, Nutraceutical, Beauty, Food, Beverage, Household Product, and Aerospace industries. Forming a single company with broad capabilities, redundancy, and market proficiency enables clients to get the best from both worlds: the infrastructure of a large organization with the responsiveness and agility of a smaller one.

### **About MyClinicalSuite™ 's Senior Team**

- Before joining PLPS as Vice President of Healthcare & Commercial Strategy, Falconer held senior healthcare packaging and executive roles at Nosco, Inc. and Inovar's Dion Label Printing, leading sales, marketing, and business development initiatives across highly regulated industries.
- Before joining PLPS as its Clinical Product Line Director, Kougelis was the Director of Materials Management at CCL Healthcare, overseeing materials, supplier relationships, and operational workflows supporting clinical trial label and packaging programs across North America.
- Before joining PLPS as National Account Manager, Wydra held senior roles at CCL Healthcare and Resource Label Group, where she developed expertise in specialty healthcare labels, extended content solutions, and packaging programs for regulated markets.
